

FreedomLoop

New from Ampetronic is FreedomLoop, a low cost induction loop amplifier designed for simple, non-engineered induction loop installations.

The FreedomLoop amplifier is designed for professional and domestic perimeter and Figure 8 loops and is capable of up to 500m² area coverage (depending on loop configuration and metal loss).

Like all Ampetronic Loop Amplifiers, the FreedomLoop delivers excellent speech intelligibility and is suitable for both musical and speech reinforcement.

Key Features include:

- Automatic gain control (otherwise known as compression)
- Metal loss correction (0dB to 3dB per octave adjustment)
- Program output monitoring via 3.5mm headphone jack
- Rack mounted
- XLR Line Level input
- Area coverage to 500m² (depending on loop configuration and metal loss)
- Excellent build quality and reliability

FreedomLoop is ideal for simple, budget installations where low-spill, low-loss or other engineered designs are not required. Of course, the Ampetronic ILD range is available for more demanding installations and a full design service is available for the ILD models.

Typical FreedomLoop applications include:

- Conference and video conference facilities
- Places of worship and community centres
- Retirement home television rooms
- Reception areas and waiting rooms
- Classrooms
- Board and meeting rooms
